## 2 Putting into Service

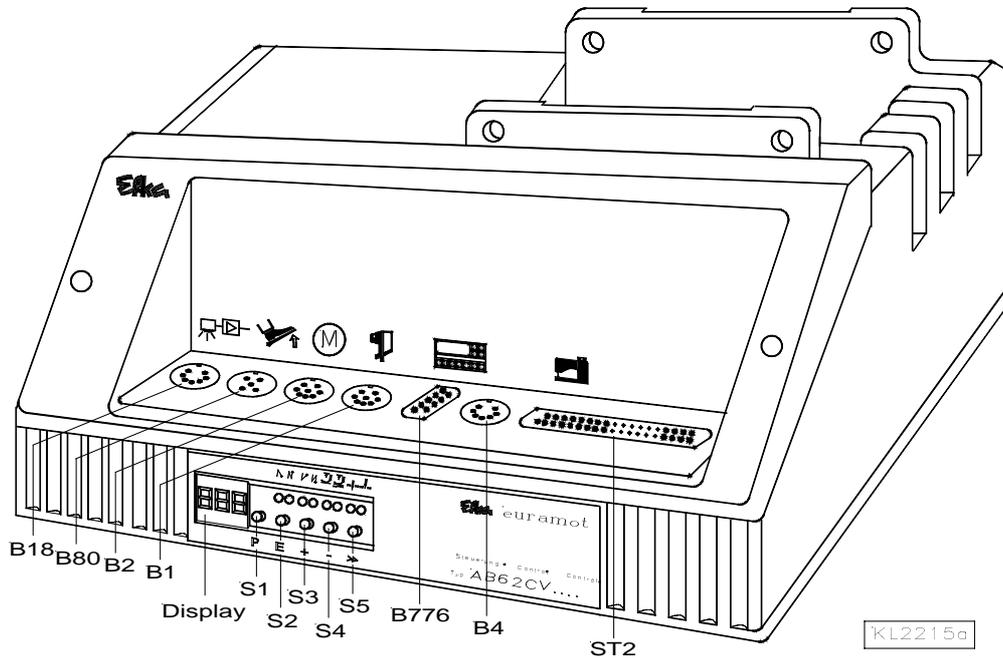

Before putting the control into service, the following must be ensured, checked and/or adjusted:

- **The correct installation of the drive, position transmitter and accompanying devices, if necessary**
- **The correct selection of the trimming operation by means of parameter 290**
- **If necessary, the correct adjustment of the direction of motor rotation by means of parameter 161**
- **The correct selection of the functions of the keys (inputs) by means of parameters 240...249**
- **The correct positioning speed by means of parameter 110**
- **The correct maximum speed compatible with the sewing machine by means of parameter 111**
- **The setting of the positions**
- **The setting of the remaining relevant parameters**
- **Start sewing in order to save the set values**

## 4 Connection Scheme of SM210A Stepping Motor Control

The AB62CV1469 control is suitable for use with the SM210A.... stepping motor control!

The AB62CV.... (B18) and the SM210A....stepping motor control (B18) are connected by means of adapter cord no. 1113113.

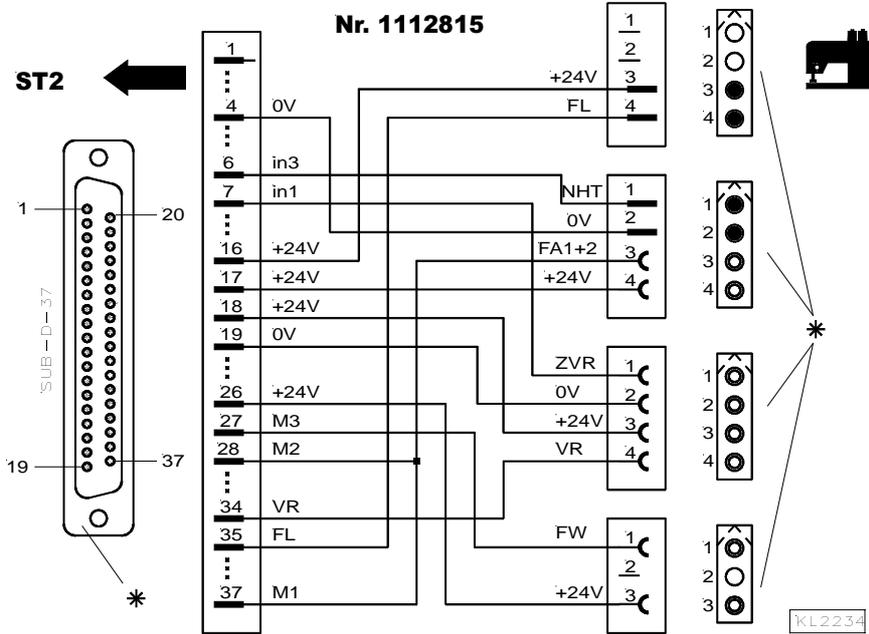

If a light barrier is required for the sewing process, it must be connected to socket B9 on the stepping motor control. The light barrier signal is transmitted via the connecting cable from the SM210A to the sewing drive.

Communication with the stepping motor control is possible if parameter 162 on the AB62CV1469 control is set at "1".
