7. Description of the MINI-STOP Drive System

The MINI-STOP Drive System is an electronically commutated, brushless DC motor.

The system is composed of the following subassemblies

Fig.7.1

Fig.7.2

Fig.7.3

Fig.7.4

Motor QE3760 (Fig.7.1) with integrated optoelectronic incremental encoder for commutation and positioning.

Control (Fig.7.2) with

- integrated mains switch
- mains connection with interference rejection circuit
- electronically controlled combinational circuit
- intermediate DC circuit
- motor-driven current inverter
- electronic control for motor control and machine specific functions

Speed control unit SWG2 (Fig.7.3)

Control panel OC-TOP (Fig.7.4 - optional)

7.1 Motor QE5540

The motor is a synchronous motor. It has a permanent-magnetic rotor, a stator with three-phase winding and an optoelectronic increment encoder for commutation and positioning.

The rated capacity of the motor (shaft capacity) is 550 W in S5 mode. The rated speed of the motor is 4000 rpm, the maximum speed is 4500 rpm.

The motor has two mains leads:

- a) four-wire with special quadripolar AMP plug (X1) for connecting the stator coil to the control system
- b) six-wire shielded with nine-pole D-sub plug (X2) for connecting the increment encoder to the control system.

7.2 Control system

Fig. 7.5

Fig 7.6

The control box is attached to the underside of the machine table by means of the four enclosed screws.

The mains connection is single-phase, using the three-wire cord protruding from the rear and a standard safety plug.

The control system has peripheral functions

on the front panel (Fig. 7.5):

1 mains switch **S1**

the Mini control panel (MPF)

contents: an LCD Display with 8 places

and 6 small keys: **M+ / M-**
 C>> / C<<
 V+ / V-

on the rear panel (Fig. 7.6):

sockets or connector plugs

- X1** quadripole socket for connecting the motor's stator coil
- X2** nine-pole D-sub jack for connecting the motor's increment encoder
- X3** nine-pole D-sub plug for connecting set point adjuster SWG2 (Art. No. 63.012)
- X4** nine-pole D-sub plug for connecting the control panel OC-TOP/AP (Art. No. 64.175)
- X5** 37-pole D-sub jack for connecting the process control system (keys, switches, solenoids, solenoid valves) on the machine.

The control system is connected with the sewing machine/ sewing equipment via:

inputs (Ex), such as for keys, switches, proximity switches, monitors, and
outputs (Ax), such as for solenoids, solenoid valves, signal indicators.

Inputs (Ex)

E1:	Feed reverse (manual backtack)	
E2:	Needle position change-over	if <616> = I 1)
	Needle up without trimming	if <616> = II
E3:	Single stitch	if <617> = I
	Backtack function changeover	if <617> = II
E4:	Presser foot lift	

- 1) <616> = I means that parameter 616 (the parameter number 616) is set to „I“.
 <616> = II means that parameter 616 (the parameter number 616) is set to „II“.

Outputs (Ax)

A2:	Magnetic thread trimmer
A3:	Thread wiper
A4:	Presser foot lift
A5:	Feed reverse
A8:	Thread tension release

7.3 Speed control unit SWG2

The SWG2 is attached to the underside of the machine table with the enclosed brackets and connected mechanically to the machine's pedal by means of the enclosed rod assembly.

The mains connection of the SWG2 is by means of a nine-pole connector on plug X3 on the rear control panel.

The SWG2 is an analogous mechanoelectronic converter, which converts the pedal path into analog voltage. This analog output voltage of the SWG2 is digitized in the control system so that the pedal path can be divided into 16 steps (positions).

Level	Position	Voltage [V]	Meaning
0	-2	0,00 - 0,50	Seam end, thread trimming
1	-1	0,50 - 0,94	Presserfoot up
2	0	0,94 - 1,76	Treadle position 0
3	+1	1,76 - 2,21	Presserfoot down
4	+1 D	2,21 - 2,43	Speed n1
5	+2 D	2,43 - 2,66	Speed n2
6	+3 D	2,66 - 2,90	Speed n3
7	+4 D	2,90 - 3,13	Speed n4
8	+5 D	3,13 - 3,37	Speed n5
9	+6 D	3,37 - 3,60	Speed n6
10	+7 D	3,60 - 3,84	Speed n7
11	+8 D	3,84 - 4,07	Speed n8
12	+9 D	4,07 - 4,31	Speed n9
13	+10 D	4,31 - 4,54	Speed n10
14	+11 D	4,54 - 4,78	Speed n11
15	+12 D	4,78 - 5,00	Speed n12

Pin connection of speed control plug (X3) of the SWG2

7.4 External operator panel OC-TOP

Fig. 7.7

The operator panel **OC-TOP/APM** (Fig. 7.7) has the following components:

- **a display:** 16-digit LCD matrix
- **14 programming keys:**
A+ / A-, B+ / B-, C+ / C-, D+ / D-, P+ / P-, S+ / S-, L+ / L-
- **2 keys (T9,T10)** for operating mode selection
- **13 keys (T1...T8, T11...T15)** for machine functions
- **outlet for two light barriers** on the rear of the OC-TOP
- **5 keys (T1 ... T5)** with their functional signification being specified by the control program (control software)

Function of the programming keys in the operating mode "manual sewing"

(key T9 is dark, key T10 is dark)

- **A+/A-** adjustment of stitchcount for start back tack forward (section A)
- **B+/B-** adjustment of stitchcount for start back tack backward (section B)
- **C+/C-** adjustment of stitchcount for end back tack backward (section C)
- **D+/D-** adjustment of stitchcount for end back tack forward (section D)

Function of the programming keys in the operating mode "programmed sewing"

(key T9 is bright, key T10 is dark)

- **A+/A-** adjustment of speed nx in program x
- **A+/A-** adjustment of stitchcount for front backtack forward (section A)
- **B+/B-** adjustment of stitchcount for front backtack backward (section B)
- **C+/C-** adjustment of stitchcount for end backtack backward (section C)
- **D+/D-** adjustment of stitchcount for end backtack forward (section D)
- **D+/D-** preselection of the program following program x
- **P+/P-** adjustment of program x (program number x)
- **S+/S-** adjustment of seam section (01...05) in program x
- **L+/L-** adjustment of the cycle counter for program repeat

Function of the programming keys in operating mode "parameter programming"

(key **T9** is dark, key **T10** is bright)

- **P+/P-** switch over of the hundreds of the parameter numbers
- **S+/S-** switch over of the parameter number in the switched on hundred section
- **L+/L-** programming of the parameter value of the switched on parameter number

Function of the keys **T9** and **T10** for selection of the operating mode

- **T9** dark, **T10** dark: manual sewing
- **T9** bright, **T10** dark: programmed sewing
- **T9** dark, **T10** bright: parameter programming
- **T9** bright, **T10** bright: teach in (s. chapter 9.1.1)

Function of the programming keys for machine functions

- **T5** function change-over for keys **T1** ... **T4** (shift key)
- **T1** linking for following seam sections (with / without)
- **T2** for speed control at programmed sewing:
variable (treadle-controlled), if **T2** dark
constant (automatic), if **T2** bright
- **T3** feed reverse for a seam section
- **T5+T3** single stitch
- **T4** seam section manual or stitchcounted
- **T5+T4** unit count in display
- **T6** start backtack (on / off)
- **T7** end backtack (on / off)
- **T8** backtack inversion
- **T11** needle position at sewing stop (up / down)
- **T12** presser foot position at sewing stop (up / down)
- **T13** presser foot position after seam end (up / down)
- **T14** thread trimming (on / off)
- **T15** sewing with light barrier (on / off)

Caution: After programming push key **T5** till LED goes out

The keys **T1**...**T15** are provided with one signal lamp each (LED). Each LED provides optical feedback on the control position of the function assigned to each key. If the function is ON, the LED is bright; if the function is OFF, the LED is dark.

8. Application

This **MINI-STOP** drive can be used **either with** or **without an external operator's control panel OCP**. Without the **operator's control panel OCP** is only manual sewing possible.

Switching on

The on/off switch (mains switch) S1 is located at the front of the control unit. When activated and live, switch S1 is lit up.

Maximum speed

The maximum speed can be adjusted with parameter <607>
either with control panel **OC-TOP**
or with the mini control panel at the front of the control unit.

8.1 Sewing without an external operator's control panel

For sewing without external operator panel, programming on the mini programming panel located on the control housing front is function-relevant.

When Indication 3 „sewing functions“ is shown on the MPF display, the following functions can be selected:

Place	Symbol	Function	Display	Meaning
1		start backtick	0 1 2	without start backtick start backtick single start backtick double
2		needle position at seam stop	0 1	down up
3		presser foot at seam stop	0 1	down up
4		end backtick	0 1 2	without end backtick end backtick single end backtick double
5		thread trimming	0 1	without thread trimming with thread trimming

Place	Symbol	Function	Display	Meaning
6		presser foot after seam end	0 1	down up
7			0	without function
8			0	without function

8.2 Sewing with External Operator's Control Panel OC-TOP

8.2.1 Sewing without Sewing Program (manual Sewing)

Condition: key T9 (P/M) is dark
key T10 (T/E) is dark

Display showing

- before start or after start, if <605> = II

Setting of rated backtack stitchcount is possible only with the machine at standstill

for front backtack forward with key A+ or key A-

for front backtack backward with key B+ or key B-

for end backtack backward with key C+ or key C-

for end backtack forward with key D+ or key D-

Display showing

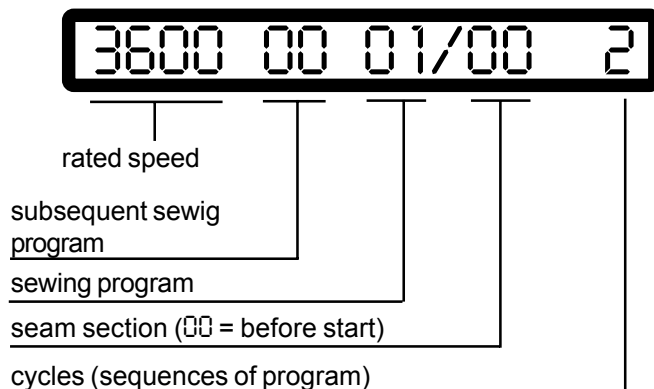

- before start, when <605> = I

8.2.2 Sewing with Sewing Program

Condition: key T9 (P/M) is bright
key T10 (T/E) is dark

Display showing before start

When this is displayed, the following can be modified:

- program: by actuating keys P+ or P-
- seam section: by actuating keys S+ or S-
- cycles: by actuating keys L+ or L-
- the subsequent sewing program via keys D+ or D-
- rated speed for the program: by actuating keys A+ or A-
This speed is limited by parameter <221>

Display before start, if a seam section has been activated

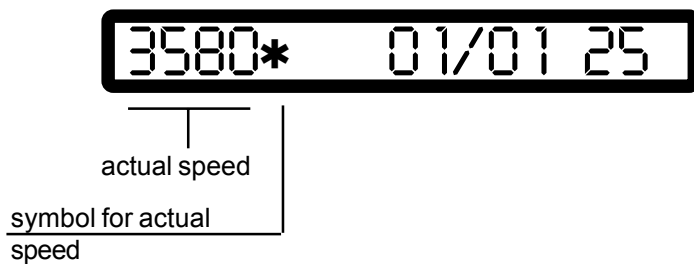

When this is displayed, the following can be modified:

- the preset backtack stitchcount for the program by actuating the keys located below the respective digits
- rated stitchcount of a seam section: by actuating keys L+ or L-
- seam section: by actuating keys S+ or S-
- program: by actuating keys P+ or P-

Display showing after start, when <605> = II

Display showing after start, when <605> = I

8.2.3 Sewing programs

a) Number of sewing programs: 5

b) Number of seam sections per sewing program: 5

c) Number of stitches per seam section: max.99

d) Adjustment of seam functions at the seam section:

front backtack	via key T6
end backtack	via key T7
needle position at sewing stop	via key T11
presser foot position at sewing stop	via key T12
presser foot position after seam end	via key T13
thread trimming	via key T14
feed reverse	via key T3 if T5 is off
Linking with the next seam section	via key T1 if T5 is off
Sewing speed constant(automatic) or variable (treadle controlled)	via key T2 if T5 is off
Seam section without stitchcount	via key T4 if T5 is off
Light barrier control	via key T15

e) **Breaking of stitchcount**

Stitchcount of a seam section can be broken via treadle position "-2."-letter "ñ" appears on the display. Manual sewing (without stitchcount) is now possible. Set treadle again at "-2" to complete seam section and advance the next one.

f) **Seam section without stitchcount**

Seam sections can be also be sewn without stitchcount (manual):
switch on T4 when T5 is off (LED dark). "m" on display signals manual seam section. For seam sections without stitchcount, display must show stitchcount ≥ 1 .
Set treadle at "-2" to complete seam section and advance the next one.

g) **Seam section with light barrier control**

The rated stitchcounts stored for this seam section are light barrier compensation stitches.

h) **Sewing speed**

The sewing speed can be individually set for each program via display before starting the sewing operation. The maximum sewing speed to be programmed is defined by parameter <221>.

i) **Interlinking of sewing programs**

It is possible to run several consecutive sewing programs. When programming, the subsequent program is displayed by digits 6 and 7 and can be entered via key D+ and D-.
□□ means that the current program will be performed exclusively; at its end return is made to its start.

j) The programs can be used as **backtack or darning programs**

Change-over is made via parameter <313>

8.2.4 Backtack/Darning Programs

- The sewing programs are turned into backtack/darning programs when parameter <313> = I.
- In each program, only seam sections 1 and 2 become active, section 1 being sewn forward and section 2 backward.
- The cycle counter (shown on the righthand side of the display above keys L+/L- before sewing start) determines the number of backtacks (single, double, 3 times, 4 times).
- The **darning program** is a special backtack program.
In this case, reset the cycle counter to "0".
- Seam end is initiated in the darning program by treadle position "-2".
- Five backtack/darning programs are available.
- Each program has one of the five function keys T1 ... T5 assigned to it.
- The activated program is indicated on the display above keys P+/P- and/or by the assigned key T1 ... T5 being luminous.
- On the lefthand side of the display, the preset maximum speed possible in the program is shown before sewing start. This speed can be varied via the keys A+/A- and can be limited via parameter <221>.
- The backtack/darning programs can be operated either at variable (treadle-controlled) or constant speed (not controlled by the treadle).
- Sewing at constant speed:
With <313> = II, switch on key T2 (luminous) during the seam sections, subsequently set <313> = I; this means backtack/darning program activated.
- Stitch compensation is activated via parameter 304. Its value (<304>) determines delayed deactivation (ms) of the feed reverse after seam section 2.

8.3 Error Messages (Malfunction Diagnostics)

The control system of the drive cyclically tests its own functional condition and the functional condition of the complete drive system.

Malfunctions are signalled via the display of the external operator panel, for instance:

List of possible error codes:

1	Treadle not in zero position when mains power is turned ON
9	Start lock
10	Machine class, <799> was changed; remedy: turn mains power switch OFF and ON again
62	Short circuit on 24 V (32 V) DC
63	Overload on 24 V (32 V) DC, load current > 4 amps
64	Power supply monitor: voltage too low (90 V - 150 V)
65	Power electronics not operational after mains power ON, mains power < 130 V
66	Earth short (motor or motor supply line has earth short in one or more phases)
67	Internal malfunction
68	Power electronics shut-off
	a) Overcurrent, short circuit in motor or supply line
	b) Overvoltage, mains voltage too high (>300 V), motor overloaded while decelerating
	c) Undervoltage
70	Machine blocked, no increment from synchronizer at max. motor torque
71	Commutation transmitter plug not inserted
73	Motor overloaded
75	Internal malfunction
90	EEPROM does not exist
91	EEPROM not programmable
92	Start lock while motor running
93	Wrong EEPROM
100-117	Internal malfunction

In case of error messages ≥ 62 , the motor will stop in undefined positions.

Control system reset possible only by mains power OFF/ON.

9.1.1 Direct programming

Attention! All values modified within direct programming are stored only when
a) the drive system is started or
b) key T9 (P/M) are pressed.
If the drive system is switched off via the mains power switch immediately after any values were modified, the values set before modification will be retained!

Regardless of the programming levels, certain values can be programmed without calling up parameter numbers - i.e. directly.

The following values can be modified by direct programming:

Front backtack stitchcount forward
Front backtack stitchcount backward
End backtack stitchcount backward
End backtack stitchcount forward
Stitchcounts for seam sections
Speeds for seam sections
Functions for seam sections

a) Modification of backtack stitchcounts

Display shown when "manual sewing" is ON (T9 (P/M) and T10 (T/E) not luminous)

The image shows a rectangular LCD display with a black border. Inside, the text "3 3 3 3 0x/00" is displayed in a digital font. The first four digits are "3", and the last part is "0x/00".

Display shown when "programmed sewing" is ON (T9 (P/M) luminous, T10 (T/E) not luminous)

The image shows a rectangular LCD display with a black border. Inside, the text "4 4 3 3 0x/01 25" is displayed in a digital font. The first four digits are "4 4 3 3", followed by "0x/01", and then "25".

The symbolic seam pictogram on the lefthand side of the operator panel shows the backtack sections

A: Front backtack forward
B: Front backtack backward
C: End backtack backward
D: End backtack forward

Immediately below the display, there are keys

A+/A- for backtack section A,
B+/B- for backtack section B,
C+/C- for backtack section C,
D+/D- for backtack section D

These keys permit to increase or decrease the backtack stitchcounts.

b) Programming of the stitchcount for a seam section

Condition: Operation mode „programmed sewing“ is on, i.e. key T9 (P/M) is bright and key T10 (T/E) is dark, machine not sewing

Display showing

Activation of a **sewing program** is made via keys P+ or P-

Activation of a **seam section** is made via keys S+ or S-

Programming of the **stitchcount** for the seam section is made via key L+ (value increased) or L- (value decreased)

c) Programming of seam sections by „Teach-in“ (performing work)

Condition: Key T9 (P/M) is bright
Key T10 (T/E) is bright

The machine must have performed at least one stitch before.

Activate the desired program in the display via keys P+ or P- and the seam section to be programmed via keys S+ or S-.

Cycle:

- Treadle forward
Reaction: the stitchcount which has been registered up to now will be eliminated
- Treadle returns to zero position
- Treadle forward
Reaction: machine sews, the sewed stitches will be added in, shown in the display and registered

Correction of the value shown in the display is possible via key L+ or L-.

d) Programming of cycles (number of sequences of program), of program speed and of the subsequent program

Condition: Operation mode „programmed sewing“ is on, i.e. key T9 (P/M) is bright and key T10 (T/E) is dark, machine not sewing

Display showing

Cycle programming is made via the keys L+ (number increased) or L- (number decreased)

Programming of the **speed** for the program is made via key A+ (value increased) or A- (value decreased)
This speed is limited by parameter <221>

Programming of the **subsequent sewing program** is made via keys D+ or D-.

e) Programming of functions

Functions for the seam sections are controlled via the functional keys

T6	Front backtack or start stitch condensation (with/without)
T7	End backtack or end stitch condensation (with/without)
T11	Needle position at sewing stop and at the end of a seam section (up/down)
T12	Presser foot position at sewing stop (up/down)
T13	Presser foot position at the end of a seam section (up/down)
T14	Thread trimming at the end of a seam section (with/without)
T15	Sewing with light barrier (with/without)
T1	Linking of seam section (with/without), if T5 is dark
T2	Speed control, if T5 is dark variable (treadle-controlled, T2 is dark) or constant (automatic, T2 is bright)
T3	Transport reverse or stitch condensation of a seam section, if T5 is dark
T4	Seam section manual or stitchcounted, if T5 is dark

9.1.2 Parameter programming

9.1.2.1 Programming level A (operator level)

This level is used for programming control parameters which immediately affect the operation sequence.
These are the parameters for the following functions:

- Front backtack (double or single)	<148>
- End backtack (double or single)	<149>
- Backtack (standard backtack or decorative backtack)	<523>
- Light barrier compensation stitches	<111>
- Light barrier fade-out	<112>
- Softstart	<116>

a) Activation of programming level A

Conditions

Mains power switch ON

Drive system not running

Operating mode: manual sewing must be ON (key T9 (P/M) dark)

A rectangular digital display with a black border. It shows four '3' digits followed by '0x/00'.

Press key T10 (T/E)

Response:

Key T10 (T/E) becomes bright, the display shows in its righthand half the first parameter (parameter no. and parameter value) associated with programming level A.

Sewing is not possible

A rectangular digital display with a black border. It shows four '3' digits, followed by '111' and '6'.

- Programming

The parameter number is set by using keys P+ or P- (hundreds of parameter no.) and keys S+ or S- (tens and units of parameter no.). The parameter value is programmed by using key L+ or L-

b) Deactivation of the programming level A

Press key T10 (T/E)

Response:

Key T10 (T/E) goes dark, the display returns to initial condition.

Sewing is possible.

A rectangular digital display with a black border. It shows four '3' digits followed by '0x/00'.

9.1.2.2 Programming level B (technician level)

This level is used for programming the control parameters which have to be modified or adapted very rarely or only for starting operation of the system.

a) Preparation for activation of the programming level B

Turn mains power switch OFF

Press and hold keys T9 (P/M) and T10 (T/E) simultaneously

Turn mains power switch ON

Release keys

Response:

The display shows a „*“ between program and seam section.

Sewing is possible.

A rectangular digital display with a black border. It shows four '3' digits followed by '0x*00'.

b) Activation of programming level B

Press key T9 (P/M) (not becoming bright) and press key T10 (T/E) (becoming bright)

Response:

In the righthand half of the display are shown: a parameter number (at first 104, then the number selected last) and the associated value.

Sewing is not possible.

The image shows a digital display with a black border. It is divided into two main sections. The left section contains four digits '3 3 3 3'. The right section contains the parameter number '104' followed by the value '8'.

Modification of parameter number:

for hundreds of parameter numbers use key P+ or P-

for tens and units of parameter numbers use key S+ or S-

Modification of parameter value: via key L+ or L-

c) Deactivation of programming level B

Press key T10 (T/E) (not becoming bright)

Response:

Parameters shown disappear from the display, the display returns to initial condition

Sewing is possible.

The image shows a digital display with a black border. It is divided into two main sections. The left section contains four digits '3 3 3 3'. The right section contains the parameter number '0x*00'.

9.1.2.3 Programming level C (special level)

Attention!

At this level, control parameters are stored the values of which have to be modified in exceptional cases only. Correction of these parameters should therefore be made only after consultation of the manufacturer.

Activation of programming level C:

- a) Activate programming level B (see 9.1.2.2)
- b) Call up parameter 798
- c) Set parameter value <798> to I
- d) Deactivate programming level B
- e) Turn mains power switch OFF, wait for >2 secs. to elapse
- f) Turn mains power switch back ON
- g) Press key T10 (T/E) (becoming bright)

Response:

In the righthand half of the display appears the first parameter of programming level C.

Calling up further parameter numbers and correcting the parameter values can be made in the same way as described for programming levels A and B.

Deactivation of programming level C:

- Press key T10 (T/E) (not becoming bright)
- Turn mains power switch OFF

9.1.3 Reset

a) Reset of parameter values

All parameter values having been modified from the ex-factory condition (standard value) are reset to their standard values by this procedure.

Exceptions: parameters 700, 799 and 800 and further parameters signed with „*“
For these parameters, the values programmed by the user are retained even after -Reset- has been performed.

-Reset- procedure:

- turn mains power switch OFF
- press treadle fully forward and hold in that position
- press and hold keys P- or P+, S- or S+ and L- or L+ simultaneously
- turn mains power switch ON
- release the three keys and the treadle

Response: Display showing

The image shows a rectangular LCD display with a black border. The text 'RESET Y - - N' is displayed in a monospaced font. 'RESET' is on the left, followed by 'Y', then two hyphens, and 'N' on the right.

Now -Reset- can be performed.

Located below the display Y (yes) there is key P+. Press this key P+ to start the reset. The display briefly shows:

The image shows a rectangular LCD display with a black border. The text 'MASTER-RESET' is displayed in a monospaced font, centered on the screen.

After that the display shows the power-on display for approx. 2 secs.

The image shows a rectangular LCD display with a black border. The text 'X4075 7Z-040-H' is displayed in a monospaced font. 'X4075' is on the left and '7Z-040-H' is on the right.

and then shows the display corresponding to the operating mode selected

The image shows a rectangular LCD display with a black border. The text '3 3 3 3 0x/00' is displayed in a monospaced font. Four '3's are on the left, followed by '0x/00' on the right.

If it is not desired to start the -Reset-, press key L+ located below the display saying N (no).

b) Reset of parameter values and sewing programs

The reset procedure including the data of the sewing programs is analog to that described under a), until the following appears in the display:

In order to reset the data of the sewing programs to their original values, it is now required before pressing key P+ to press at first key T8 and hold until activation is acknowledged in the display.

9.2 User Programming via the Internal Mini Programming Panel (MPF)

Fig. 9.2

The **MPF** comprises the following functional elements:

- the six programming keys: **M+** / **M-** / **C<<** / **C>>** / **V+** / **V-**
- the display: eight-digit LCD matrix

Each digit on the display is identified by a symbol for a sewing function.

The **MPF** is activated only when no external operating panel **OC-TOP** is connected to the control system.

When the drive system is turned on, message 01 is shown on the display for approx. 1 sec: type of control system (e.g. P43MS).

Indication 01:

Subsequently, Indication 02 is shown on the display: software status (e.g. 7Z_043_4).

Indication 02:

After approx. 1 sec has elapsed, the display will show message 1 (backtack stitches)

The following different options can be selected on the display:

Indication 1: backtack stitches

Indication 2: speed

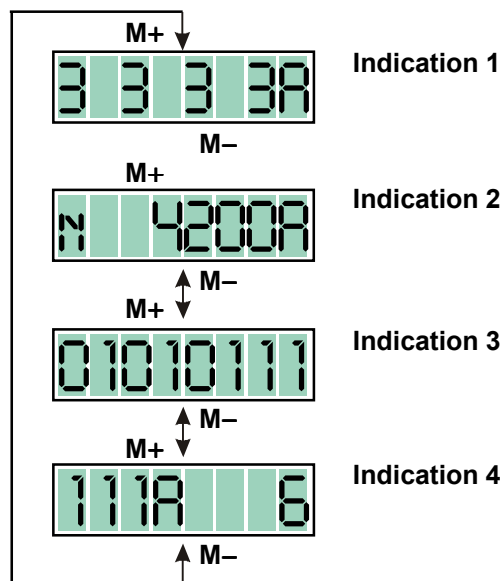

Indication 3: sewing functions

Indication 4: control parameters

Indication 5: hardware test (<797> = I, see chapter 10.5)

Indication 6: reset

Change-over from indication 1 to indication 4 is made by actuating keys M+ or M- and is possible only when the drive stopped.

Sewing:

Sewing can be performed under any of the options 1, 2, 3 and 4 if none of the digits is blinking.

Programming:

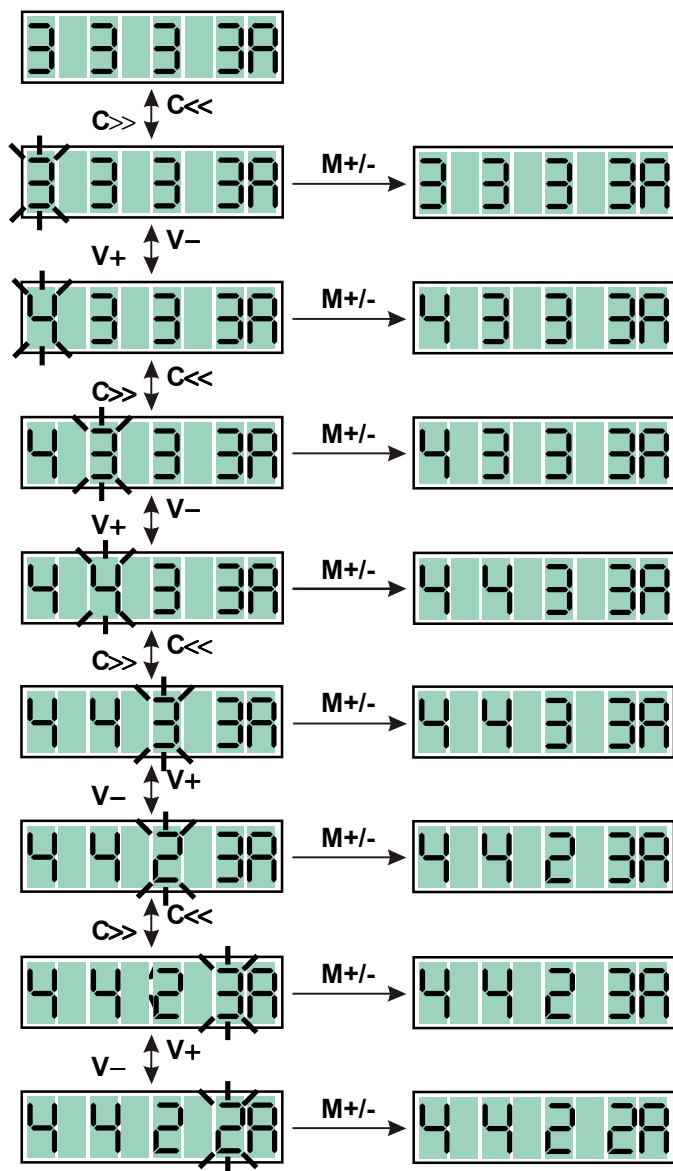

Programming is possible when one of the digits is blinking.

Release for programming and advance from digit to digit is made by actuating keys C>> / C<< and is possible only when the drive unit is at standstill.

9.2.1 Indication 1: Backtick Stitches

Backtick stitch programming

Programming Procedure

- Use keys C>> or C<< to make digits blink; sewing is not possible.
- Use keys V+ or V- to increase or decrease the number of blinking digits.
- Use keys M+ or M- to cause blinking to stop; sewing is possible again.

9.2.2 Indication 2: Speed

This option can be used for selecting the machine's operating speed (nominal speed) between maximum speed (<607>) and minimum speed (<606>), when parameter <676> = 1.

Adjustment of Nominal Speed

- Use keys V+ or V- to increase or decrease the figure shown in discrete steps.

Display of Actual Speed (<605> = 1)

During machine operation, the current operating speed (actual speed) of the machine is displayed. While actual speed is shown, „*“ appears in the 2nd digit of the display.

9.2.3 Indication 3: Sewing functions

Place	Symbol	Function	Display	Meaning
1		start backtack	0 1 2	without start backtack start backtack single start backtack double
2		needle position at seam stop	0 1	down up
3		presser foot at seam stop	0 1	down up
4		end backtack	0 1 2	without end backtack end backtack single end backtack double
5		thread trimming	0 1	without thread trimming with thread trimming
6		presser foot at seam stop	0 1	down up
7			0	without function
8			0	without function

Programming of the Sewing Functions

Programming Procedure

- Use keys **C>>** or **C<<** to make digits blink; sewing is not possible.
- Use keys **V+** or **V-** to increase or decrease the number of blinking digits.
- Use keys **M+** or **M-** to cause blinking to stop; sewing is possible again.

9.2.4 Indication 4: Control Parameters

The meaning of the control parameters can be seen from Chapter 11.4 „List of Parameters“.

The control parameters are arranged on three different programming levels (A, B, C).

Programming Level A

Parameters on level A can be accessed when the drive unit is turned ON in the normal way.

Programming Level B

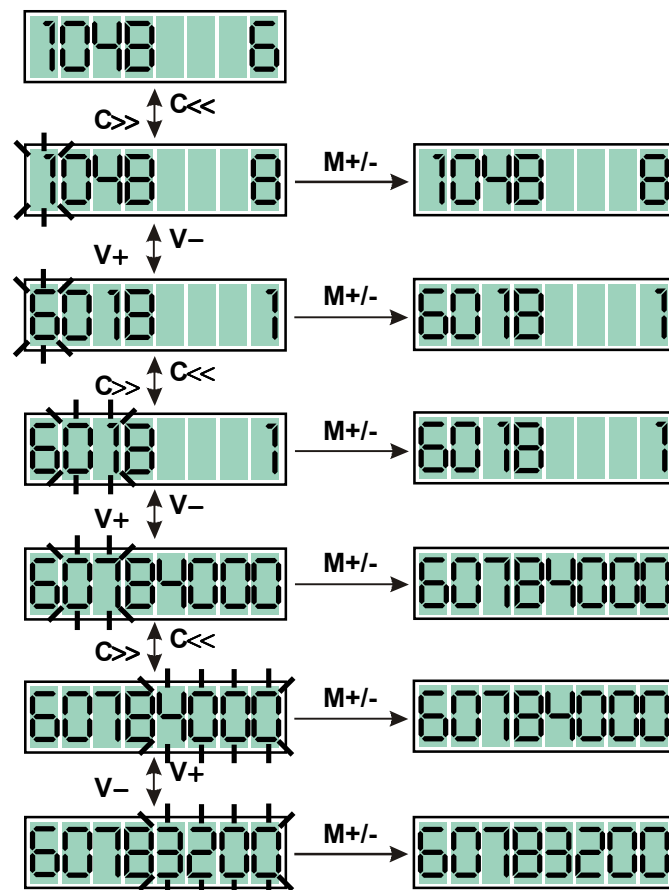

In order to access parameters on programming level B, proceed as described below when turning power on:

- Turn OFF power switch **S1**
- Press and hold key **M+** and **V+** simultaneously
- Turn ON power switch **S1**

⇒ Indication 1 shows „B“ in its extreme righthand (8th) digit.

Use keys **M+** or **M-** to advance to Indication 4.

Programming of Control Parameters

Programming Procedure

- Use keys **C>>** or **C<<** to make digits blink; sewing is not possible.
- Use keys **V+** or **V-** to increase or decrease the number of blinking digits.
- Use keys **M+** or **M-** to cause blinking to stop; sewing is possible again.

Programming Level C

In order to access parameters on programming level C, at first take preparatory action on programming level B by changing parameter (software switch) 798 to I (<798> = I). Then either change display by actuating keys **M+** or **M-** or call up a different parameter by actuating keys **C>>** or **C<<** and **V+** or **V-**.
Now turn the power switch OFF and immediately ON again.

⇒ Indication 1 shows „C“ in its extreme righthand (8th) digit.

Use keys M+ or M- to advance to Indication 4.
This activates programming level C.

Programming level C includes all parameters (including those on levels A and B).

9.2.5 Reset

Any parameters having been modified from their original (standard) condition can be restored to their standard condition by „reset“.

Exceptions:

Parameters 700, 799, 800 and some further parameters identified by „*“ in the list of parameters. For these parameters, the conditions programmed by the user will be maintained even after a „reset“ is performed.

Reset Procedure

- Turn OFF power switch **S1**.
- Toe the treadle fully forward and hold in that position.
- Press and hold keys **M-** and **V-** simultaneously.
- Turn ON power switch **S1**.
- Stop pressing keys and stop toeing the treadle.

Response: Indication 6

To make „reset“, subsequently press key **M+**.
If it is intended not to make a „reset“, press key **M-**.

Subsequently, the display will show the indication 1.

10. Start of operation

If the **MINI-STOP** has been stored at a temperature of $\leq +5^{\circ}\text{C}$, then a working temperature of between $+5^{\circ}\text{C}$ and $+40^{\circ}\text{C}$ must first be obtained.
The equipment must be dry.

Before work with the machine can be started, make sure to perform the following:

- a) Control the direction of rotation and the reference position of the needle bar
- b) Control the needle positions
- c) Control the maximum speed

10.1 Control of the direction of rotation

- a) Actuate treadle briefly forward:
Reaction: The machine performs a full revolution and then positions in a random position.
- b) Is the direction of rotation correct?
When yes, then proceed with 10.2
If no, then activate parameter 800
- c) Activate programming level B (technician level, see section 9.1.2.2 „programming level B“)
- d) Set parameter 800
- e) change the value $\langle 800 \rangle$ (I \rightarrow II or II \rightarrow I)
- f) As soon as new parameter numbers are activated, or the programming level B is negated, then the parameter value $\langle 800 \rangle$ is memorized.

10.2 Control of the needle positions NP1/NP2/NP3/NP9

NP1 - needle down position ($\langle 702 \rangle$)

NP2 - thread take up lever in the up position ($\langle 703 \rangle$)

NP3 - needle up ($\langle 710 \rangle$)

NP9 - start thread tension release / start thread catcher ($\langle 707 \rangle$)

By correct mounting of the tooth belt (see chapter 6.2), the zero position (reference position) of the machine shaft can be made to coincide with the zero position of the incremental encoder (rotor position encoder) of the motor.

If adjustment between machine and motor has been correctly made, the correct needle positions are established by the standard conditions of parameters $\langle 702 \rangle$, $\langle 703 \rangle$, $\langle 707 \rangle$ and $\langle 710 \rangle$.

- a) Activate programming level B (technician level) (see section 9.1.2.2 „programming level B“)
- b) Activate parameter 702
- c) Actuate the treadle briefly forward
Reaction: The machine performs a revolution and then positions at the programmed $\langle 702 \rangle$.
- d) Is the needle position correct?
When yes, then proceed as with g) below.
When no, then the position must be changed by turning the hand wheel (when $\langle 701 \rangle = \text{I}$) or via key L+ or L- (when $\langle 701 \rangle = \text{II}$)
- e) Actuate the treadle briefly forward
Reaction: The machine performs a revolution and positions in the same position.
- f) The position can again be corrected.
When no further correction is needed, then proceed as with g) below.
- g) As soon as another parameter number is called up, e.g. example 703, the previously programmed value of $\langle 702 \rangle$ is memorized.
- h) With parameter 703, 707 and 710 correction is obtained as described above for parameter 702.
- i) Deactivate programming level B (see section 9.1.2.2 „programming level B“).

10.3 Control of the needle position NP5 for thread trimming

NP5 - End of trimming signal

- a) Activate programming level B (technician level) (see section 9.1.2.2 „programming level B“)
- b) Set parameter 705
- c) Actuate the treadle briefly forward
Reaction: The machine performs a revolution and positions at the indicated <705>.
- d) Is the position correct?
When yes, then proceed as g) below.
When no, then the position must be corrected by turning the hand wheel (when <701> = I) or via keys L+ or L- (when <701> = II).
- e) Activate the treadle forward.
Reaction: The machine performs a revolution and positions at the corrected program value <705>.
- f) The position can again be corrected.
If no further correction is needed, then proceed as g) below.
- g) Back heel the treadle.
Reaction: The machine rotates to NP6, <705> is memorized, programming (correction of position) is no longer possible.
- h) If the treadle is back heeled then the thread trim procedure will be activated and the machine performs one revolution.
- i) Should parameter <705> be changed again, then the sequence from c) above must be repeated.
- j) Deactivate program level B (see section 9.1.2.2 „programming level B“).

10.4 Control of the maximum speed

- a) Activate programming level B (see section 9.1.2.2 "programming level B")
- b) Set to parameter 607
- c) Check the parameter value <607> and make correction if necessary via keys L+ or L-
- d) Deactivate programming level B (see section 9.1.2.2 "programming level B")

10.5 Hardware Test

Hardware Test is a check routine permitting to use the operator panel **OC-TOP** or the mini programming panel **MPF** for testing various components of the drive system (control system) and of the machine installation.

Activation of the „HARDWARE TEST“ = „HW-Test“ routine

- Activate programming level „B“ and call up parameter 797
- Set <797> to I
- Deactivate programming level „B“
- Turn off mains switch **S1**
- Wait for approx. 2 secs. to elapse, and turn on main switch S1 again.

Response: The display shows for approx. 2 secs:

indication OC-TOP:

HARDWARE TEST

indication MPF:

HW-TEST

After that, the display shows the first test block: Inputs.
All OC-TOP keys equipped with LEDs become bright

Survey of test blocks:

Test-Block	Check	indication OC-TOP	indication MPF
1	Inputs	E01 0 X5:3	E01 0
2	Outputs	A02 0 X5:1	A02 0
3	Speed control-unit	SUG 0	SUG 0
4	Synchronizer	IUG 0	IUG 000

To call up the test blocks (advancing from test block to test block), use keys **A+** and **A-** on the **OC-TOP** or with the keys **M+** / **M-** on the **Mini Control Panel (MCP)** in front of the control box.

To call up various functional elements within a test block such as advancing from an Input to the next, use keys B+ and B- on the control panel **OC-TOP** or with the keys C>> / C<< on the **MCP**.

To activate functional elements selected, use key D+ on the **OC-TOP** or the key V+ on the **MCP**.

Test block 1: Inputs

Display:

The function assigned to the input displayed can be seen from chapter 12 „Connections Diagram for Connectors“.

The designations E (for input) are located on the lefthand side of the connectors shown.

The keys or selectors assigned to the inputs are designated S in the connections diagram and have the same numbers as the associated inputs, i.e.

key S1 is connected to input E1

key S2 is connected to input E2

key Sx is connected to input Ex.

The operating state of the input is signalled in the 7th digit of the display.

Key/switch open → display: 0

Key/switch closed → display: 1

In the righthand part of the display, the connecting plug and the pin number to which the displayed input is connected are shown for the purpose of reference.

Test block 2: Outputs

Display:

The function assigned to the output displayed can be seen from chapter 12 „Connections Diagram for Connectors“.

The designations A (for output) are located on the lefthand side of the connectors shown.
The solenoids/solenoid valves assigned to the outputs are designated Y in the connections diagram and have the same numbers as the associated outputs, i.e.
solenoid Y2 is connected to output A2
solenoid Y3 is connected to output A3
solenoid Yx is connected to output Ax

The operating state of the output displayed is signalled in the 7th digit of the display.
Output not activated → display: 0
Output activated → display: 1

To activate an output, use key D+. Deactivation is made automatically after approx. 2.5 secs have elapsed or can be caused by using key D-.

In the righthand part of the display, the connecting plug and the pin number to which the displayed output is connected are shown for the purpose of reference.

Test block 3: Speed control unit (SWG)

Display:

The treadle can be actuated to operate consecutively all 16 steps of the speed control unit.

The following is displayed in digits 6, 7 and 8

-2 / -1 / 0 / +1 / 10 / 20 / ... / 120, when the speed control unit is in proper condition.

Test block 4: Synchronizer (IWG)

Display:

This test block permits to check the synchronizer (increment encoder). For this purpose, the shaft of the motor is rotated manually.

The increments (pulses) of the synchronizer are counted and shown in display digits 7, 8 and 9.
This display runs from 0 through 127 when the synchronizer is in proper condition.

To deactivate the test routine, turn the mains power switch OFF.
